

## Test cases :

**Test 1 :** Testing the user's ability to register.

Test :

- Fill in all the information required in the registering window.
- Try to click the register button once the registration is complete
- Leave some text boxes empty when doing the registration

Expected Result :

- The user's informations should be added to the database
- The register button will not work for the already registered user
- User can't proceed with registration if all the information are not filled

**Test 2 :** Testing the user's ability to log in once registration has already been performed.

Test :

Log in using the following credentials :

username : cgao034@uottawa.ca

password : 123

radioGroup : <client>

Expected Result :

The message "Welcome [cgao034@uottawa.ca](mailto:cgao034@uottawa.ca) you have signed in as a client" should appear

**Test 3 :** Testing if the list of complaints is available and each complaints detail is accessible.

Test :

Sign in as admin and click the complaints button (*admin credentials given in the README file*)

Expected Result :

The complaints list should appear and all the complaint's details can be seen

**Test 4 :** Testing the admin ability to suspend cooks.

Test :

Sign in as admin.

At the moment there is only two pre-created cook profiles in the Database :

Cook ID: -NFfWIEINt15r21P20Vr

username: 2267941973@qq.com

password: 321

Cook ID: -NFfeULYz4sBzrR3Ot1l

username: linab@gmail.com

password: lina

The admin chooses which one to suspend and sets the suspend time if temporary suspension is selected.

Expected Result :

The cook's activity status should be set to Temporarily suspended.

When the suspended cook tries to log in, they should see the message that the admin typed for them.
